

Air Travel

- Air Travel incidents have cut in half over the last 15 years, whereas the number of severe accidents by motor travel grows each month.
- Each day during peak commute times you are at risk of being in an accident no matter what you travel by.
- As Air Travel has progressed, even when an incident occurred, those aboard stay safe. With motor vehicles this is in reverse.

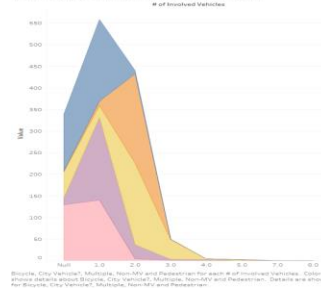

Severity VS Injury in Motor Vehicle accidents

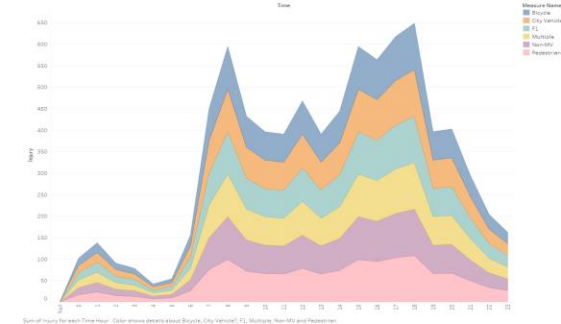

Fatalities 2000-2014 compared to 1985-1999

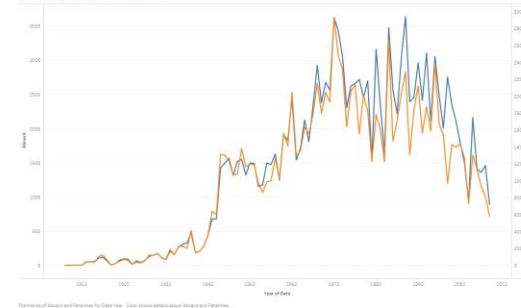

Sum of Injury for each Severity.

Travel Injury Type by Hour
